

# Environmental Policy

## Aquamate's 'Zero Waste' Attitude to Manufacturing

Aquamate is committed to managing all aspects of our operations in an environmentally responsible manner at all times. As a manufacturer who's core product offering is a combination of steel and thermoplastic polymers, Aquamate understands that some resources are finite. We also know that the continuing sustainability of our business requires the efficient use of all resources, in addition to our obligation to comply industry and community environmental standards.

## Aims & Objectives

We are committed to environmentally sustainable management, by minimising waste and maximising the use of renewable materials. We will achieve this by working with our customers, suppliers and the community to adopt policies that:

- minimise waste by prioritising re-use, recycling and use of renewable resources
- maximise the use of environmentally acceptable materials and processes, in place of those which are considered harmful to the environment

## Responsibilities

As part of our commitment to the environment, Aquamate will:

- comply with all regulatory requirements and industry norms
- ensure all environmental policies and procedures are implemented
- establish and monitor targets to minimise waste
- review our environmental objectives and targets through formal Management Review Meetings

Employees and sub-contractors will assist in achieving 'Zero Waste' by:

- following all Environmental policies and procedures
- actively assisting in the identification and control of impacts which may cause harm to the environment
